

Reams Asset Management Low Duration 1-3 Year

Investment Philosophy

Reams defines risk as permanent loss of principal or the inability to meet investment objectives. This is distinct from other investors who may define risk as volatility or tracking error versus a benchmark. Another differentiating feature is that Reams focuses on reacting to relative value opportunities and taking advantage of volatility, rather than relying on economic forecasting and predicting market movements. These guiding beliefs lead the team to:

- Focus on long-term value and total return
- Employ both top-down macro and bottom-up strategies to uncover unique opportunities
- React opportunistically to valuation discrepancies and volatility in the bond market
- Create diversified bond portfolios in an attempt to outperform over a full market cycle
- Seek opportunities to add value in niche parts of the market overlooked by larger managers

Strategy Overview

- The standard benchmark is the ICE® BofAML® 1-3 Year U.S. Corp/Gov't. Index (other benchmarks may be utilized for separate accounts based on client-specific guidelines).
- Invest tactically across all sectors of the fixed income market including investment-grade and high yield credit, governments, agencies, mortgage-backed, asset-backed and non-US dollar.
- Actively manage overall portfolio duration based on market conditions, normally within a range of 1 to 3 years.
- May use derivative instruments such as futures, options and credit default swaps, if explicitly authorized by client guidelines, in order to gain exposure and manage risk

Investment Process

Step One: Duration and Yield-Curve Decision

Goal: Determine whether the bond market is cheap or expensive

- Emphasize real interest rates and formulate a long-term view
- Take advantage of yield curve opportunities

Step Two: Sector Decision and Bond Selection

Goal: Identify bonds with the highest risk-adjusted returns

- Actively rotate across sectors based on relative value and select individual bonds expected to perform well in dynamic interest rate and credit environments
- Focus on senior positions within the capital structure and use stress testing/scenario analysis to evaluate potential outcomes

Step Three: Risk Analysis and Control

Goal: Continually measure and control exposure to key risk factors

- Employ external and proprietary analytical tools to manage and control risk at security, sector and portfolio levels
- Avoid backward looking risk measures and "risk budgeting" approaches to portfolio construction

Total Strategy Assets

\$1,136.8 million

Portfolio Management Team

Mark Egan, CFA

Lead Portfolio Manager

- Joined Reams Asset Management in 1990
- 39 years of investment experience

Todd Thompson, CFA

Co-Portfolio Manager

- Joined Reams Asset Management in 2001
- 31 years of investment experience

Clark Holland, CFA

Co-Portfolio Manager

- Joined Reams Asset Management in 2002
- 31 years of investment experience

Jason Hoyer, CFA

Co-Portfolio Manager

- Joined Reams Asset Management in 2015
- 22 years of investment experience

Dimitri Silva, CFA

Low Duration 1-3 year vs. eVestment U.S. Short Duration Fixed Income Universe[†]

Trailing Period Returns (as of June 30, 2025)

Source: Nasdaq eVestment

Ranking within eVestment US Short Duration Fixed Income universe based on monthly returns gross of fees. Ranking data calculated on July 21, 2025 (as of June 30, 2025) and is subject to change as additional firms within the category submit data. Reams Asset Management pays an annual fee to eVestment to access their platform and to use their data, including peer group rankings, in marketing materials. Reams Asset Management does not pay for the ranking.

Performance Attribution[†]

Q2 2025 (gross of fees)

Source	Impact %
Duration Management	0.02
Yield Curve Positioning	0.03
Total Macro	0.05
Sector Allocation	0.18
Security Selection	0.21
Total Selection	0.38
Fees	-0.05%

Contributors / Detractors

- Duration and yield curve positioning both contributed to returns during the quarter because the exposure to the longer-dated segments was additive.
- Investment grade (IG) corporates made the largest contribution as the sector outperformed despite spread volatility.
- The overweight allocation to mortgage-backed securities (MBS) continued contributing to performance.
- A continued overweight to asset-backed securities (ABS) detracted as spreads widened during the quarter.
- Limited exposure to commercial mortgage-backed securities (CMBS) was neutral for performance during the quarter.
- The largest contributions from security selection came from agency and non-agency mortgages.
- Securities within ABS that had attractive embedded options also continued yielding positive results.

Total	101.3	100.0

Positioning and Rationale

- Exposure to IG corporates increased quarter over quarter, maintaining a meaningful overweight relative to the index.
- Non-index exposure to ABS decreased.
- Exposure to agency and non-agency MBS increased, reflecting the attractiveness of the asset class —especially in this strategy's opportunity set.
- The allocation to U.S. Treasuries decreased, remaining significantly underweight to accommodate an overweight allocation to IG corporates and non-index exposures to ABS, agency and non-agency residential mortgage-backed securities (RMBS), and CMBS.
- Portfolio duration increased slightly compared to the previous quarter and ended flat relative to the benchmark. Yield curve exposure featured overweights to the 0- to 1-year, 3- to 4-year, and 4- to 5-year duration segments, along with a commensurate underweight to the 1- to 2-year and 2- to 3-year duration segments.

(1) Sector and Quality Exposure may not sum to 100% in some cases. To the extent derivative instruments are held and shown at full notional, collateral will be assigned to its defined Sector or Quality Exposure. Cash & Equivalents may include securities with an effective duration less than one year and rated investment grade.

(2) The bond quality ratings indicated are assigned by credit rating agencies Standard & Poor's, Moody's, and Fitch as an indication of an issuer's creditworthiness. Unless specified by client investment guidelines, the middle of three or highest of two credit quality ratings available from these rating agencies is used. Credit quality is subject to change. Ratings are measured on a scale that generally ranges from AAA (highest) to D (lowest). Credit ratings are statements of opinions and are not statements of fact or recommendations to purchase, hold or sell securities. They do not address the appropriateness of securities or the appropriateness of securities for investment purposes, and should not be relied on as investment advice.

The information provided is based on the aggregate characteristics of all securities held in a representative portfolio as of the date listed. The data provided in this report is for informational purposes only and should not be considered a recommendation to purchase or sell any particular security. It should not be assumed that any of the holdings discussed were or will prove to be profitable. Holdings may change daily and may vary among accounts. Data is obtained from third party sources and is believed to be accurate and reliable.

Disclosure

The 1-3 Year Low Duration Fixed Income Strategy invests primarily in investment grade securities, while maintaining an average portfolio duration of generally between one and three years.

Historically, bonds have provided less volatility and less risk of loss of capital than has equity investing. However, there are many factors which may affect the risk and return profile of a fixed income portfolio. The two most prominent factors are interest-rate movements and the creditworthiness of the bond issuer. Investors should pay careful attention to the types of fixed-income securities which comprise their portfolio, and remember that, as with all investments, there is the risk of the loss of capital.

Mortgage- and Asset-Backed Securities are subject to prepayment risk and the risk of default on the underlying mortgages or other assets. Foreign investments present additional risks due to currency fluctuations, economic and political factors, government regulations, differences in accounting standards and other factors.

Bonds issued by the U.S. Government have significantly less risk of default than those issued by corporations and municipalities. However, the overall return on Government bonds tends to be less than these other types of fixed-income securities.

The eVestment U.S. Short Duration Fixed Income Universe consists U.S. fixed income products that invest primarily in high quality debt (as rated by Moody's or Standard & Poor's) with an emphasis on bonds with a short duration. The expected benchmarks for this universe would include the Bloomberg 1-3 Year Gov't/Credit, or Merrill Lynch US Treasuries 1-3 Yrs. Managers in this category will typically indicate a "Fixed Income Style Emphasis" equal to Gov't/Agency Only or Core and a "Product Duration Emphasis" equal to Short.
